WORK EXPERIENCE

From 09/2023 to present

Technical Lead at Cambium

I lead technical work and define the system architecture to support carbon projects from evaluation to dMRV. I work across science, cloud infrastructure and analytics, with a strong focus on geospatial. The tech team consists of myself and one other teammate, so I am deeply involved in both strategic design and hands-on development.

- Defined and deployed Cambium's data architecture based on Google Cloud using PostgreSQL on Kubernetes, Databricks, DuckDB, Coiled, Dask, Xarray, and MLFlow
- Built an end-to-end data integration pipeline for our forestry partners using Prefect and dbt, incorporating data validation, staging/production environments, and controlled release cycles
- Developed a machine learning model for Above-Ground Biomass (AGB) estimation using XGBoost, Dask, Optuna, and ESA CCI data, achieving 30m resolution outputs aligned with Verra's VM0047 methodology
- Designed a site selection platform for ARR carbon project evaluation in Brazil, including a CARTO-based dashboard and automated reporting system
- Actively contributed to carbon project design, integrating ecological connectivity principles by analyzing protected areas, optimizing species selection, and assessing spatial distribution to balance carbon sequestration objectives with ecological and conservation priorities.

From 08/2022 to 09/2023

Support Lead at CARTO

I led and coordinated the Support and Response teams, managing urgent incidents and escalations for enterprise clients. Worked cross-functionally with Engineering, Sales, and Customer Success to ensure fast, high-quality solutions. Drove continuous improvement in support processes, knowledge sharing, and team performance.

- Led a team of 4 Support Engineers to resolve technical challenges and ensure quality of service. Coordinated with other teams as Response Team Manager and handled complex cases affecting Enterprise customers.
- Created an automated system using Zendesk, Shortcut, Slack and Zapier to provide client context to Support agents and improve response times and overall quality of service ensuring SLAs are not missed.
- Coordinated engineers across departments as Response Team Manager, handling complex, high-impact technical challenges.
- Served as Technical Account Manager for key clients, developing custom solutions and delivering hands-on consultancy on ETL, complex applications performance improvements, data management and analytics on top of BigQuery, Redshift, Snowflake and PostgreSQL.
- Improved platform reliability by fixing bugs and contributing code in key components such as our Data Services API (Python, SQL), CARTOframes package (Python) or our Import API (Cloud Native, TypeScript)

From 02/2022 to 08/2022

Senior Support engineer at CARTO

Assisted customers with complex technical problems, providing internal support and guidance for other teammates. Leading consultancy projects for customers and helping with Response Team tasks management and platform code contribution.

From 01/2020 to 02/2022	Support Engineer at CARTO Supported customers and internal teams with technical problems, contributing to platform code through the Response Team and providing technical consultancy to clients.
From 12/2018 to 07/2019	GIS engineer at Tasvalor Medio Ambiente (TMA) S.L I was responsible for the GIS department in environmental impact assessment and urban planning projects.
From 04/2016 to 07/2017	Production assistant at Aleia Roses S.L. I worked as an agronomic technician in Integrated Pest Management, leading a team of 3 people.

LANGUAGES

Spanish	Native
English	Professional

COMPUTER SKILLS

Programming languages	Python, SQL, Bash
Data & Analytics	Prefect, Airflow, dbt, Polars, DuckDB, Dask, sklearn, XGBoost, MLFlow
Databases, data lakes and DWs	PostgreSQL, Delta Lake, Databricks, BigQuery, Snowflake
Geospatial	Python (Geopandas, Xarray), STAC, H3, PostGIS, CARTO, QGIS, GEE
Cloud & Infrastructure	GCP, Terraform, ArgoCD, Docker, Kubernetes, Coiled

PERSONAL SKILLS

Team player. I value open communication, sincerity and rigorous work. Problem-solving mindset with a knack for new and challenging problems. Creativity and open-mindedness in addition to strong analytical skills.

EDUCATION

From 09/2017 to 02/2020	Master degree in Forest engineering E.T.S.I Montes, Forestal y del Medio Natural, UPM
From 2012 to 2017	Environmental engineering E.T.S.I Montes, Forestal y del Medio Natural, UPM

VOLUNTEERING

From 12/2023 to present	PyData Madrid Organizer of monthly community meetups
From 11/2020 to present	External collaborator at GEOQUBIDY (UPM, URJC) I collaborate and provide technical guidance to the Group of Earth Observation for Quantitative Biosphere Dynamics team on anything related to Cloud infrastructure and scalable analytics.
